ELECTRICAL ITEMS / APPLIANCES FOR EXPORT

Any electrical item(s) submitted for export must be fully PAT tested by persons and/or companies who are registered and certified to do so by the ENVIRONMENT AGENCY, or other relevant authority in the case of continental European movements.

Each individual item should be labelled and signed by the tester to confirm when the testing took place along with piece/serial number of the item which should also be clearly marked on a summary sheet along with description and any other relevant info – in the case of refrigerators/freezers this should also include temperature testing info - the summary sheet must then be attached to the inside door of the container.

The summary sheet must be accurate and fully completed, each item must be clearly labelled once only with the up to date testing info - any kind of expired/missing information and/or discrepancy of any kind in both labelling and summary sheet can result in the container being rejected for export with all charges for account of booking party.

It is entirely the responsibility of the booking party to familiarise themselves with the latest rules and regulations concerning the export of electrical items and their obligations in this respect.

For more information please contact UK ENVIRONMENT AGENCY, telephone 03708 506 506
